

## **Investment Linked Fund Performance Report February 2017**

### **General Advice Warning**

The information contained in this material is general information and intended for the use of professional advisers, researchers and trustees. It does not take into account the objectives, financial situation or needs of any person. These factors should be considered before acting on this information.

MCIS receives remuneration such as fees, charges or premiums for the products. Details of these payments including how they are calculated and when and how they are payable can be found in the relevant sales illustrations, or other disclosure document for each product.

### **Past performance is not a reliable indicator of future performance**

The information in this presentation should not be considered a personal recommendation on any of the securities or stocks mentioned.

## EXECUTIVE SUMMARY

Global and regional equity markets continued their rallies in February. For the local bourse, FBMKLCI index gained 1.3% or 22 points to close at 1,693.77. Highlight of the month was the end of 4Q16 results. This was the best quarter so far in the past one year, with most companies recording results above consensus expectations. The broader market outperformed, with the FBM EMAS gaining 1.8% m-o-m to 11,950.28points.

Malaysian Government Securities (MGS) performance was mixed in February 2017, with longer tenor strengthened (yield decreased between 1 to 8 bps) while shorter tenor weakened (yield increased between 3 to 10 bps). Ringgit and crude oil price were stabilizing with ringgit still hovering around RM4.43/USD to RM4.44/USD while Brent crude oil price were in the range of USD55-USD56/barrel, closing the month with USD55.59/ barrel.

Exports continued to accelerate to 13.6% y-o-y in January, on the back of a recovery in global demand and a broad-based pick-up in all three major groups of exports.

On the outlook, earnings performance is poised for a recovery this year. It is backed by better economic growth globally and domestically, recovery in oil and commodity prices, strengthening ringgit, bigger construction jobs and potential general election this year. We also do not discount the risks of the US fiscal expansion, economic slowdown in China and OPEC members/non-members commitment in controlling the oil price. We are optimistic on the equity market with a buy on weakness strategy. Meanwhile, the overall strategy for the fixed income market is still to buy on dips of MGS and corporate bonds.

Based on the performance table below, on monthly basis, only Balanced Fund had outperformed their benchmarks.

Policyholders are encouraged to focus into regular premium given the current risk and volatile period of the economic and market condition. Risk adverse investors should focus into income fund due to its less volatile as compared to equity related funds. Postive view on the Bursa Malaysia may be positive for funds with local equity exposure namely Dividend, Equity and Jati Funds.

Performance Table: Funds vs Benchmarks

	Asiapac Fund		Balanced Fund		Dividend Fund		Equity Fund		Global Yakin Fund		Income Fund		Jati Fund

# AsiaPac Fund Monthly Report (February 2017)

## Investment Objective

To achieve steady income stream with potential growth in the Asia Pacific Region over medium to long term. The aim of the Fund is to outperform the S&P Ethical Pan Asia Select Dividend Opportunities Index over periods of five or more years.

## Investment Strategy

To invest in Asia Pacific Ethical Dividend Exchange Traded Fund (ETF), managed by CIMB Principal Asset Management where the ETF is listed on the Singapore Stock Exchange.

The ETF focuses on top 40 ethical and high yielding stocks in the Asia Pacific Region excluding India, Taiwan, Japan, New Zealand and Philippines. The fund provides country diversification across the industry that is traded in US Dollar.

## Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The target market is for investors who are seeking regional exposure from investment and at the same time, seeking for medium to long term capital appreciation with moderate market risk.

## Fund Performance

For the month ended February 2017, the fund had underperformed the benchmark by 157bps MoM (month on month). However for since inception period, the fund had outperformed the benchmark.

**Notice: Past performance is not indicative of future performance, and the performance of the Fund is not guaranteed.**

The Fund returns are calculated by MCIS and based on the value of the NAV, and for periods greater than 12-months are annualised numbers. Actual returns of the Fund are on a net basis (gross of tax and net of fees) and based on the performance of the Fund, and not the returns earned on the actual premiums/ contributions paid for the product.

\* Index is S&P Ethical Pan Asia Select Dividend Opportunities sourced from Bloomberg.

Other Charges: Switching Fee, you are entitled to four free switches per policy year. Additional switches within the same year will be charged at 1% of the value of units switched, subject to a maximum of RM 50; and all taxes, duties and other charges incurred in the purchase, sale, valuation and maintenance of the investments of the Fund.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

## Balanced Fund Monthly Report (February 2017)

### Investment Objective

The objective of the Balanced Fund is to provide security and income, while maintaining and potentially increasing the value of capital over the medium to long-term, through exposure across a range of asset classes. The Fund aims to outperform the performance benchmark over periods of three or more years.

### Investment Strategy

To invest in Malaysian equities and fixed income securities, including government bonds and corporate debt securities. The asset allocation is reviewed on a regular basis, and is adjusted commensurate with our view on the relative attractiveness of each asset class.

### Risks

The Fund is considered medium risk given the mixed exposure of equity securities, fixed income and cash. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, industry and economy development, social and political factors, and the liquidity of the underlying assets. Additionally, levels of interest rates, and credit downgrades of defaults can affect the value of fixed income securities

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

### Fund Performance

For the month ended February 2017, the fund had outperformed the benchmark by 2bps MoM (month on month). The outperformance was mainly driven by higher exposure of outperforming securities in the portfolio compared to benchmark.

\* The benchmark index is a composite of 50% FBM KLCI Index and 50% of Markit iBoxx ALBI Malaysia TR Index (Since Dec '12). Prior to that, the index used was HSBC Malaysia All Bond Index for the fixed income portion. Benchmark return is calculated on re-based basis. The source is from the subscription of Markit Indices.

Other Charges: Switching Fee, you are entitled to four free switches per policy year. Additional switches within the same year will be charged at 1% of the value of units switched, subject to a maximum of RM 50; and all taxes, duties and other charges incurred in the purchase, sale, valuation and maintenance of the investments of the Fund.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

## Dividend Fund Monthly Report (February 2017)

### Investment Objective

To achieve steady income stream with potential for capital growth over medium to long term by focusing mostly on high dividend yielding stocks and money market instruments. The aim of the Fund is to outperform the FBM KLCI Index over periods of five or more years.

### Investment Strategy

To invest in a broad selection of companies listed on the Malaysian Stock Exchange. Using a relative value methodology, the fund focuses on undervalued stocks relative to fundamental value, with the aim of achieving an income stream, together with some degree of long-term capital gains.

### Risks

The Fund is considered high risk given the exposure to equity securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets.

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

### Fund Performance

For the month ended February 2017, the fund had underperformed the benchmark by 78bps MoM (month on month). The underperformance was mainly driven by higher exposure of underperforming stocks in the portfolio compared to benchmark.

# Global Yakin Fund

## Monthly Report (February 2017)

### Investment Objective

The fund aims for capital appreciation in the long term by investing in an international portfolio of Shariah-compliant equities and equity-related securities of companies with good growth potential.

### Investment Strategy

The Fund is to feed into Aberdeen Islamic World Equity Fund (AIWEF) which managed by Aberdeen Islamic Asset Management Sdn Bhd. The Fund invests in shariah approved securities across the globe.

The Fund seeks to achieve its objective by investing in an international portfolio of Shariah-compliant equities and equity-related securities of companies with good growth potential. The countries that the Fund will invest in will include, but not limited to Canada, United States of America, United Kingdom, France, Germany, Italy, Netherlands, Sweden, Switzerland, Japan, Australia, China, Hong Kong, Korea, Singapore, Taiwan, Brazil and Mexico.

### Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The Fund is suitable for investors who seek capital appreciation over a long term investment horizon and who are willing to accept high level of risk.

### Fund Performance

For the month ended February 2017, the fund had underperformed the benchmark by 70bps MoM (month on month). The underperformance was mainly due to underperforming of the underlying securities compared to the benchmark index.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

# Income Fund

## Monthly Report (February 2017)

### Investment Objective

The objective of the Income Fund is to provide investors with security of income by investing in a mix of fixed income and fixed deposit securities. The aim of the Fund is to outperform the HSBC Malaysia Local Currency All Bond Total Return Index.

### Investment Strategy

To invest into underlying asset classes as per the Asset Allocation Ranges. The asset allocation is reviewed on a regular basis, and is adjusted commensurate with our view on the relative attractiveness of each asset class. The Fund invests in cash and fixed income securities including government bonds and corporate debt securities.

### Risks

The Fund is considered lower risk given the exposure to cash and fixed income securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets. Additionally, levels of interest rates, and credit downgrades or defaults can affect the value of fixed income securities.

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

### Fund Performance

For the month ended February 2017, the fund had underperformed the benchmark by 8bps MoM (month on month). The underperformance was due to underperforming of the fixed income securities compared to the benchmark index.

# Jati Fund

## Monthly Report (February 2017)

### Investment Objective

The Jati Fund is invested in accordance with Shariah principles in Shariah sanctioned equities, money market instruments, and fixed income investments. The aim is to provide security and income, while maintaining and potentially increasing the value of capital over the medium to long-term. The Jati Fund is not a takaful product.

### Investment Strategy

To invest in a broad selection of Shariah approved securities listed on the Malaysian Stock Exchange. Using a relative value methodology it looks to buy stocks whose shares appear undervalued relative to fundamental value, with the aim of achieving an income stream, together with some degree of long-term capital gains.

### Risks

The Fund is considered high risk given the exposure to equity securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets.

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

### Fund Performance

For the month ended February 2017, the fund had underperformed the benchmark by 53bps MoM (month on month). The underperformance was mainly driven by higher exposure of underperforming stocks in the portfolio compared to benchmark.

Other Charges: Switching Fee, you are entitled to four free switches per policy year. Additional switches within the same year will be charged at 1% of the value of units switched, subject to a maximum of RM 50; and all taxes, duties and other charges incurred in the purchase, sale, valuation and maintenance of the investments of the Fund.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

# Equity Market Review and Outlook

## Market Review

Global and regional equity markets continued their rallies in February. For the local bourse, FBMKLCI index gained 1.3% or 22 points to close at 1,693.77. Highlight of the month was the end of 4Q16 results. This was the best quarter so far in the past one year, with most companies recording results above consensus expectations. The broader market outperformed, with the FBM EMAS gaining 1.8% m-o-m to 11,950.28points. Average daily value traded on Bursa in January increased 31% m-o-m to RM2.53billion.

On the domestic economic front, exports continued to accelerate to 13.6% y-o-y in January, on the back of a recovery in global demand and a broad-based pick-up in all three major groups of exports. Meanwhile, Malaysia's forex reserves remained stable at USD95billion as at end of February, which was unchanged from the previous month. This suggests that the outflow of foreign capital could have subsided in February, while the requirement to convert 75% of export proceeds may have helped as well. In ringgit terms, forex reserves rose by MYR0.3billion to MYR426.3billion in the same period.

Globally, the second reading of US real GDP remained stable at a pace of 1.9% in 4Q16, compared with +3.5% in 3Q. The reading remained at its pace, as the pickup in personal consumption was offset by the slowdown in gross private investment. Meanwhile, the US consumer confidence climbed 2.9% to a reading of 114.8 in February, hits 15-year high, as the post-election rally in consumer sentiment continue to gain momentum. The increase was on the back higher readings on current conditions and future expectations.

## Market Outlook & Strategy

Technically, current rally, which started in October 2008 is approaching into the ninth year. The longest rally in Bursa Malaysia history is 10-years which recorded from 1998 to 2008. The index is currently at mid-point of its long term regression line since 1977. However, monthly MACD has confirmed its golden cross signal to end a 30 months of dead cross signal, the longest since 1978. This positive signal may push the market higher.

On the outlook, earnings performance is poised for a recovery this year. It is backed by better economic growth globally and domestically, recovery in oil and commodity prices, strengthening ringgit, bigger construction jobs and potential general election this year. We also do not discount the risks of the US fiscal expansion, economic slowdown in China and OPEC members/non-members commitment in controlling the oil price.

The above factors may support the recovery on the equity market. We believe after 3 years of consolidation period, Bursa Malaysia will enter its recovery mode supported by strong inflows of foreign fund seen in the first two months of the year 2017. We are optimistic on the equity market with a buy on weakness strategy.

# Fixed Income Review and Outlook

## Market Review

Malaysian Government Securities (MGS) performance was mixed in February 2017, with longer tenor strengthened (yield decreased between 1 to 8 bps) while shorter tenor weakened (yield increased between 3 to 10 bps). Ringgit and crude oil price were stabilizing with ringgit still hovering around RM4.43/USD to RM4.44/USD while Brent crude oil price were in the range of USD55-USD56/barrel, closing the month with USD55.59/ barrel.

On economic data, Malaysia recorded a Gross Domestic Product (GDP) growth of 4.5% for the 4<sup>th</sup> quarter of 2016. On a quarter-on-quarter seasonally adjusted, the GDP grew 1.4%. On the production side, Services sector remained as the main force for economy growth in the quarter. Furthermore, advancement by Manufacturing and Mining & Quarrying sectors reinforced the overall economic performance. Meanwhile, Private Final Consumption Expenditure and Gross Fixed Capital Formation were the main catalyst on the expenditure side. For the year 2016, Malaysia's GDP grew 4.2%.

During the Monetary Policy Committee (MPC) meeting on 3<sup>rd</sup> February 2017, BNM has decided to maintain the Overnight Policy Rate (OPR) at 3.00%, in line with market expectation. Meanwhile, it was expected that the US Federal Reserves (the Fed) will hike the Fund Fed rate this coming Federal Open Market Committee (FOMC) meeting on 14<sup>th</sup> to 15<sup>th</sup> March 2017.

The auctions unveiled in February 2017 are as follows:

Government Auctions in February 2017				
Issue	Issue Date	Amount (RM million)	Bid-cover (times)	Avg Yield (%)
7.5-year New Issue of MGII (Mat on 08/24)	15-Feb-17	4,000	3.123	4.045
30-year Re-opening of MGS (Mat on 03/46)	28-Feb-17	2,000	2.562	4.676

In January 2016, foreign investors continue to trim their holdings in Ringgit government securities with holding in MGS and GII decreased by RM3.09 billion to RM186.9 billion. In our opinion, foreign players remained guarded, even with the stabilizing local bonds performance during the month.

## Market Outlook & Strategy

In view of the current investment climate, the overall strategy for the fixed income market is still to buy on dips of MGS and corporate bonds. We will be diligent in taking some profit for the bonds that have rallied passed their fundamental values from time to time to ensure resilience in realizing income. Overall, we believe bonds still provide attractive yields as there is uncertainty within all investment markets as we embrace global financial market volatilities due a change in power from Obama to Trump's administration in the US. Domestic growth, while expected to be decent compared to other global economies as reported by the authorities of the country and media, we believe local growth will be subdue in addition to increased elements of "surprise" factors.
