Investment-Linked Fund Performance Report April 2022

General Advice Warning

The information contained in this material is general information and intended for the use of professional advisers, researchers and trustees. It does not take into account the objectives, financial situation or needs of any person. These factors should be considered before acting on this information.

MCIS receives remuneration such as fees, charges or premiums for the products. Details of these payments including how they are calculated and when and how they are payable can be found in the relevant sales illustrations, or other disclosure document for each product.

MCIS Life has received on behalf of the funds, soft commissions from our investment fund bankers/brokers, in the form of research materials and investment-related publications which are incidental to the investment management of the funds. This report, among others, incorporate consolidated contents for the benefit of MCIS Life's policyholders.

Past performance is not a reliable indicator of future performance

The information in this presentation should not be considered a personal recommendation on any of the securities or stocks mentioned.

EXECUTIVE SUMMARY

The FBMKLCI Index closed marginally higher in the month of April by 0.8% MoM to close at 1,600.43 points. Even though there were concerns over inflationary impact from rising commodity prices, weaker ringgit, and the on-going Russia-Ukraine, the local index managed to overcome the negativities with the positive news, thanks to the reopening of international border and relaxation of COVID-19 restrictions.

Malaysia Government Securities (“MGS”) yield surged across the curve, reflecting that the major world economies have started to tighten monetary policy in combating the increasing inflationary pressure globally. Amid the worries of prolonged COVID-19 lockdown in Shanghai and Russia-Ukraine tension, the Brent crude oil prices settled at USD109.34/barrel as at end-Apr’22 (end-Mar’22: USD107.91/barrel). Meanwhile, Ringgit weakened sharply to MYR4.355/USD (Mar’22: MYR4.204/USD) on the back of capital flight to safe haven.

On the local economic data, the inflation was unchanged at +2.2% YoY in Mar’22, mainly attributable to the diminishing base effect of transport cost (Mar’22: +2.6% YoY; Feb’22: +3.9% YoY). Despite of the rising global crude oil prices, the local subsidy of RON95 fuel and diesel fuel, electricity tariff freeze and food price ceilings kept inflation in check.

For equity market, in short term, we expect the market will take advantage on the rising commodity prices, borders reopening, and better corporate earnings. For the longer run, we believe the local equity market will improve supported by better domestic activities locally and foreign support. However, we are still cautious on the increasing market volatility and external uncertainties.

For fixed income, BNM is anticipated to tune monetary stance to slight hawkish in 2022 when the COVID-19 pandemic is nearing to the end. The external risk factors such as Russia-Ukraine tension and the fluctuation in crude oil prices will continue to weigh on the local market, but we believe corporate bond space still provides attractive yields. As such, we will keep looking to buy on dips of corporate bonds if the opportunity arises.

Based on table below, on monthly basis, all the funds managed to outperformed the respective benchmarks.

Policyholders are encouraged to focus into regular premium given the current risk and volatile period of the economic and market condition. Risk adverse investors should focus into income fund due to its less volatile as compared to equity related funds.

AsiaPac Fund Monthly Report (April 2022)

Investment Objective

To achieve steady income stream with potential growth in the Asia Pacific Region over medium to long term. The aim of the Fund is to outperform the S&P Ethical Pan Asia Select Dividend Opportunities Index over periods of five or more years.

Investment Strategy

To invest in Principal S&P Asia Pacific Ethical Dividend Exchange Traded Fund (ETF), managed by Principal Asset Management Berhad where the ETF is listed on the Singapore Stock Exchange.

The ETF focuses on top 40 ethical and high yielding stocks in the Asia Pacific Region excluding India, Taiwan, Japan, New Zealand and Philippines. The fund provides country diversification across the industry that is traded in US Dollar.

Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The target market is for investors who are seeking regional exposure from investment and at the same time, seeking for medium to long term capital appreciation with moderate market risk.

Fund Performance

For the month ended April 2022, the fund had outperformed the benchmark by 185bps MoM (month-on-month). The fund had outperformed the benchmark since inception.

Notice: Past performance is not indicative of future performance, and the performance of the Fund is not guaranteed.

The Fund returns are calculated by MCIS Life and based on the value of the NAV and for periods greater than 12-months are annualised numbers. Actual returns of the Fund are on a net basis (gross of tax and net of fees) and based on the performance of the Fund, and not the returns earned on the actual premiums/ contributions paid for the product.

* Index is S&P Ethical Pan Asia Select Dividend Opportunities sourced from Bloomberg.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

Balanced Fund Monthly Report (April 2022)

Investment Objective

The objective of the Balanced Fund is to provide security and income, while maintaining and potentially increasing the value of capital over the medium to long-term, through exposure across a range of asset classes. The Fund aims to outperform the performance benchmark over periods of three or more years.

Investment Strategy

To invest in Malaysian equities and fixed income securities, including government bonds and corporate debt securities. The asset allocation is reviewed on a regular basis, and is adjusted commensurate with our view on the relative attractiveness of each asset class.

Risks

The Fund is considered medium risk given the mixed exposure of equity securities, fixed income and cash. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, industry and economy development, social and political factors, and the liquidity of the underlying assets. Additionally, levels of interest rates, and credit downgrades of defaults can affect the value of fixed income securities

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

Fund Performance

For the month ended April 2022, the fund had outperformed the benchmark by 83bps MoM (month-on-month). The outperformance was mainly driven by higher exposure of outperforming securities in the portfolio compared to benchmark.

* The benchmark index is a composite of 50% FBMKLCI Index and 50% of Markit iBoxx ALBI Malaysia TR Index (Since June '16). Prior to that, the index used was HSBC Malaysia All Bond Index for the fixed income portion. Benchmark return is calculated on re-based basis. The source is from the subscription of Markit Indices.

The NAV per unit of the Fund is the total market value of assets in the Fund divided by the total number of units of the Fund. Transaction costs, taxes and applicable fees are provided for in the net asset value.

Dividend Fund Monthly Report (April 2022)

Investment Objective

To achieve steady income stream with potential for capital growth over medium to long term by focusing mostly on high dividend yielding stocks and money market instruments. The aim of the Fund is to outperform the FBMKLCI Index over periods of five or more years.

Investment Strategy

To invest in a broad selection of companies listed on the Malaysian Stock Exchange. Using a relative value methodology, the fund focuses on undervalued stocks relative to fundamental value, with the aim of achieving an income stream, together with some degree of long-term capital gains.

Risks

The Fund is considered high risk given the exposure to equity securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets.

The target market is clients wanting the surety of insurance protection, with an element of potential upside investment exposure.

Fund Performance

For the month ended April 2022, the fund had outperformed the benchmark by 56bps MoM (month-on-month). The outperformance was mainly driven by higher exposure of outperforming securities in the portfolio compared to benchmark.

Global Yakin Fund

Monthly Report (April 2022)

Investment Objective

The fund aims for capital appreciation in the long term by investing in an international portfolio of Shariah-compliant equities and equity-related securities of companies with good growth potential.

Investment Strategy

The Fund is to feed into abrdn Islamic World Equity Fund ("AIWEF") (formerly known as Aberdeen Standard Islamic World Equity Fund) which managed by abrdn Islamic Malaysia Sdn Bhd (formerly known as Aberdeen Standard Investments (Malaysia) Sdn Bhd). The Fund invests in shariah approved securities across the globe.

The Fund seeks to achieve its objective by investing in an international portfolio of Shariah-compliant equities and equity-related securities of companies with good growth potential. The countries that the Fund will invest in will include, but not limited to Canada, United States of America, United Kingdom, France, Germany, Italy, Netherlands, Sweden, Switzerland, Japan, Australia, China, Hong Kong, Korea, Singapore, Taiwan, Brazil and Mexico.

Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The Fund is suitable for investors who seek capital appreciation over a long-term investment horizon and who are willing to accept high level of risk.

Fund Performance

For the month ended April 2022, the fund had outperformed the benchmark by 100bps MoM (month-on-month). The outperformance was mainly due to outperforming of the underlying securities compared to the benchmark index.

Jati Fund

Monthly Report (April 2022)

Investment Objective

The Jati Fund is invested in accordance with Shariah principles in Shariah sanctioned equities, money market instruments, and fixed income investments. The aim is to provide security and income, while maintaining and potentially increasing the value of capital over the medium to long-term. The Jati Fund is not a takaful product.

Investment Strategy

To invest in a broad selection of Shariah approved securities listed on the Malaysian Stock Exchange. Using a relative value methodology, it looks to buy stocks whose shares appear undervalued relative to fundamental value, with the aim of achieving an income stream, together with some degree of long-term capital gains.

Risks

The Fund is considered high risk given the exposure to equity securities. The following factors can potentially affect the value of the Fund; consumer sentiment, financial performance of the underlying companies, the performance of the industry and economy, and the share market in general, social and political factors, and the liquidity of the underlying assets.

Titan Fund

Monthly Report (April 2022)

Investment Objective

The Fund invests in MyETF Dow Jones U.S. Titans 50 ("MyETF-US50") which aims to provide investment results that closely correspond to the performance of the Dow Jones Islamic Market U.S. Titans 50 Index.

Investment Strategy

MyETFDJ50 is managed by i-VCAP Management Sdn Bhd and it invests into 50 largest Shariah compliant companies listed in the U.S. MyETFDJ50 is a passively managed fund.

Risks

The Fund is considered low risk given the exposure to only one underlying securities with no attempt to select stocks individually or to take defensive positions in declining markets. Risk is managed at the management level, where the asset allocation of the fund to be reviewed on regular basis, and adjusted to commensurate with the Investment Team view on the relative attractiveness of each asset class.

The following factors can potentially affect the value of the Fund; economic and political developments in related countries, foreign exchange fluctuation, illiquid and inefficient securities in the Emerging Markets, and the financial performance of the underlying companies.

The Fund is suitable for investors who are seeking for diversification and investment opportunities in Shariah-compliant equities in the U.S. market and seeking liquid financial instruments with an index tracking feature.

Fund Performance

For the month ended April 2022, the fund had outperformed the benchmark by 676bps MoM (month-on-month).

Equity Market Review and Outlook

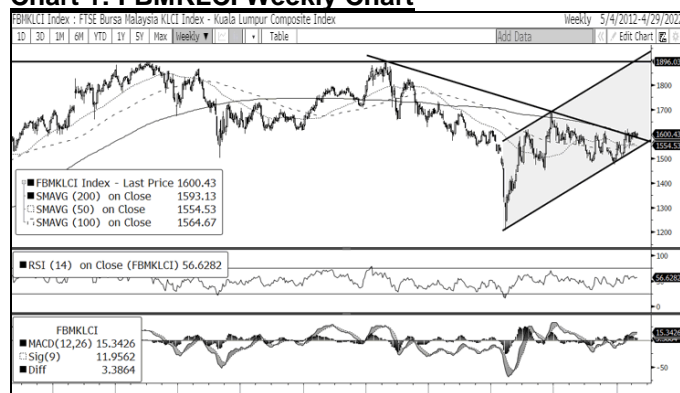

Market Review

The FBMKLCI Index closed marginally higher in the month of April by 0.8% MoM to close at 1,600.43 points. Even though there were concerns over inflationary impact from rising commodity prices, weaker ringgit, and the on-going Russia-Ukraine, the local index managed to overcome the negativities with the positive news, thanks to the reopening of international border and relaxation of COVID-19 restrictions. The average daily trading volumes rose 0.4% MoM to 3.2bil units in April, while average daily trading value fell 25% MoM to MYR2.3bil.

During the month, foreign investors were the largest net buyers of RM826mil of local equities (MYR3.3bil in March '22). This lowered the cumulative net foreign outflows since 2010 to MYR27.6bil. Local institutional investors continued as net sellers of MYR1.1bil worth of equities (MYR3.6bil net sell in March '22). Meanwhile, local retailers' net buying fell to MYR172mil (from MYR321mil in March '22).

Global equity market fell in the month of April 2022. Most of the indices were hit by the ongoing war in Ukraine, lockdown in China, continued supply chain disruptions, and expectations that US interest rates could rise swiftly. US shares were sharply lower after disappointing updates from some previously fast-growing companies. In the US, Dow Jones Industrial index weakened by -4.9% MoM and the broader S&P 500 index closed lower by -8.8% MoM. Meanwhile in Europe, the performances of the indices were also negative as Bloomberg European 500 index closed -1.1% MoM. In Asia, the performance was mostly negative except for Indonesia and Malaysia. The MSCI Asia APEX 50 ex-Japan closed -6.5% MoM during the month.

Market Outlook & Strategy

Traditionally, FBMKLCI index's performance tends to be mixed in May, with an average monthly return of -0.6%/1.2% over the past 10 years/44 years. We expect the market to be supportive by its attractive valuations at current levels of 1.58x as it is now below its 25-year historical average of P/B (1.82x) and 15.8x PER compared to the 22-year historical average of PER (17.0x). As at 30th April 2022, 81.6% of Malaysia's population has taken the second dose of Covid-19 vaccine, meanwhile 49.0% has taken the booster. This has slightly lifted the market sentiment with more economic and social activities leniency were allowed by the government, especially with the international border reopening starting 1st April 22.

Technically, the FBMKLCI Index was relatively stable in April when it clawed back March's losses. Since 2H21, the local index has been volatile to be trading within 1,480-1,615 range. We expect the index to face more sideways in the month of May, with the upside capped by the strong resistance at 1,618-1,625. If the benchmark rallies and break the resistance, it shows bullish trend. On the other hand, support is seen at the 1,555 levels, followed by 1,520. A break below the levels is negative for the short term.

For short term, we expect the market will take advantage on the rising commodity prices, borders reopening, and better corporate earnings. For the longer run, we believe the local equity market will improve supported by better domestic activities locally and foreign support. However, we are still cautious on the increasing market volatility and external uncertainties.

Fixed Income Review and Outlook

Market Review

Malaysia Government Securities (“MGS”) yield surged across the curve, reflecting that the major world economies have started to tighten monetary policy in combating the increasing inflationary pressure globally. Amid the worries of prolonged COVID-19 lockdown in Shanghai and Russia-Ukraine tension, the Brent crude oil prices were last seen at USD109.34/barrel as at end-Apr’22 (end-Mar’22: USD107.91/barrel). Meanwhile, Ringgit weakened sharply to MYR4.355/USD (Mar’22: MYR4.204/USD) on the back of capital flight to safe haven.

On the local economic data, the inflation was unchanged at +2.2% YoY in Mar’22, mainly attributable to the diminishing base effect of transport cost (Mar’22: +2.6% YoY; Feb’22: +3.9% YoY). Despite of the rising global crude oil prices, the local subsidy of RON95 fuel and diesel fuel, electricity tariff freeze and food price ceilings kept inflation in check. Inflation of Food & Non-Alcoholic Beverages (“FNAB”) continued to creep higher to +4.0% YoY (Feb’22 +3.7% YoY), in line with the rising global food prices as well as the higher fertilizer and feed meal costs.

Exports and Imports in Mar’22 grew by +25.4% YoY (Feb’22: +16.8% YoY) and +29.9% YoY (Feb’22: +18.3% YoY). Given the global supply shortage from Russia, Ukraine and China, the Exports growth was mainly driven by manufacturing products, agriculture products and mining products. All in all, trade surplus widened to +MYR26.7b in Mar’22 (Feb’22: +MYR19.8b).

Malaysia external reserve declined to USD112.5b as at end-Apr’22 (end-Mar’22: USD115.6b), driven by the portfolio outflow and strong importer demand. The reserve is sufficient to cover 5.9 months of retained imports and 1.2 times short-term external debt.

The auctions unveiled in Apr’22 is as follow;

Government Auctions		Amount	Bid-cover	Avg Yield
Issue	Issue Date	(RM million)	(times)	(%)
10.5year Re-Issuance of GII(Mat II 10)	7/4/2022	4,500.00	2.50	4.19
20.5year Re-Issuance of MGS(Mat GS 10)	14/4/2022	5,000.00	1.92	4.70
15year Re-Issuance of GII(Mat II 7/)	21/4/2022	5,000.00	1.88	4.83
7year Re-Issuance of MGS(Mat GS 4/)	29/4/2022	5,000.00	2.20	4.50

The 10-year US Treasury yield spiked to 2.94% as at end-Apr’22 (end-Mar’22: 2.34%) given the rising inflationary pressure. Meantime, the US Fed is signalling an aggressive monetary tightening to fight against a 40-year high inflation.

Market Outlook & Strategy

BNM is anticipated to tune monetary stance to hawkish in 2022 when the COVID-19 pandemic is nearing to the end. The external risk factors such as Russia-Ukraine tension and the fluctuation in crude oil prices will continue to weigh on the local market, but we believe corporate bond space still provides attractive yields. As such, we will keep looking to buy on dips of corporate bonds if the opportunity arises.
